ORYX

COMBAT SYSTEM

ORYX The Ultimate Adaptable Warfighter System. Designed with the future soldier in mind, Oryx is built to deliver the highest level of performance and comfort. It's fully adaptable to every mission and can be used with or without body armor. Its scalable, modular configuration enables each soldier to choose the right Oryx pack size for every mission-specific load.

AQUAPOD

Hydration system

Hagor is proud to present the AQUAPOD, the next generation of hydration drinking bags. Exclusively developed for end-users in the tactical world & for Backpackers. The uniqueness of AQUAPOD stems from its 3D structure, which confers some significant benefits.

FEATURE

- Simplicity: AQUAPOD is simple and easy to use, both in terms of operation and maintenance.
- Cleaning Instructions: the cleaning process is simple. Remove the upper lid, insert cleaning cloth, clean thoroughly with the use of your hand.
- Operation: The AQUAPOD has two aggregation modes. In the 'Fill' mode, the bag is transformed from a two-dimensional, to a three-dimensional bag, which allows the user to refill in a convenient and efficient manner without spillage.
- Structural strength: The AQUAPOD is more durable compared to similar products on the market due to a lower amount of welded parts. A reduction in the amount of welded parts produces a final product with lower failure points.
- Ventilation and drying capacity: The structure of the product allows for better and faster ventilation and drying ability. In a situation where the AQUAPOD hangs upside down, it is easier to ventilate and clean it.
- Weight. The weight of the AQUAPOD is lower compared to other products in the market. The weight reduction is due to the unification of various elements into a unified assembly.

HYDRATION SYSTEM

- Material – Microban® TPU 04, BPA & Phthalate Free. Anti-Bacterial
- Mil-STD – Tested and improved by Israeli Standards Institute.
- Pressure resistance – Over 200 KG accordance to STD- ASTM D 882
- Drop test – accordance to STD-ASTM D 55276.
- Sensory Analysis Triangle Test – accordance to STD- DIN 10955

BOMB BLANKET

The Hagor Bomb Blanket is designed to absorb the impact from Improvised Explosive Devices (IEDs) and lessening the shrapnel associated with pipe bombs, hand grenades, and other fragments around explosives. It can also be used for ballistic blast protection in vehicle and aircraft interiors and flooring.

Designed with 8 large nylon loop handles on all sides of the blanket for easy deployment, placement and adjustment it includes a 15cm high safety ring.

With a tough and durable cover to resist wear and tear, it is designed to fold into a compact space for easy storage

Features

Material: Aramid UD

Outer shell: Polyester 600D, PU, WR

Nylon webbing straps

Color: Orange / Yellow / Olive Green / Navy Blue / Black

Size: 160x160cm / 160x120cm / 120x120cm

Weight: 17kg / 33kg / 9.5kg

Protection level: IIIA in accordance to MIL-STD-662F, V-50>600m/sec

MINEFIELD MATRESS

The Mine Matress prevents the activation of a mine by evenly distributing a person's weight over a large surface, so that the applied weight on the mine located under the matress is significantly lower than the mine's activation threshold.

The Mine Matress is constructed of a hard stepping surface, covering the top part of the matress, strapped to a flexible envelope beneath.

The envelope contains 5 compartments, each containing a flexible air cushion. The air cushions are connected by tubes and adapters, enabling airflow which balances the pressure in the cushions.

There are 3 ways to use the mine matress:

Placing several matresses in proximity to create a safe passageway in the minefield, allowing for unlimited number of users to cross.

Using the Mine Matress to kneel close to a mine in order to detect it and neutralize it.

Using the Mine Matress to break through a minefield. The Mine Matress serves as a base, enabling soldiers to enter the minefield and place Bangalore Torpedoes on the matresses. The detonation creates a safe and a clean passage for men and vehicles. The matress flexibility makes it suitable for any terrain.

Features

Size: 70x70x13 cm

Each matress can carry up to 200kg

Weight: 3.2kg

Volume: 60 liters

MINEFIELD CROSSING SANDALS

MiCS is a unique product designed to distribute the weight of the user over a large area, so that the pressure applied on the mine under the MiCS is lower than the pressure required to activate the mine.

By using MiCS, the user can safely clear mines or evacuate wounded personnel from the minefield.

Technical Specifications:

Size: 35x70x13 cm

Each sandal can carry up to 150kg

Weight: 2.3kg

Features

Minefield crossing sandals are composed of four main components:

- A hard-treading surface made of plastic.
- Harnessing straps that lock the user's shoe to the treading surface.
- A flexible fabric envelope from Kordura@1000 & PVC coated Nylon, containing 5 compartments.
- An air system that includes 5 air cushions from PE coated Nylon and connecting tubes
- The soft fabric envelope is composed of 5 compartments, each one containing an air cushion. These cushions are connected to each other via an air manifold tube. The top part of the envelope is connected to the treading surface via a harness, and the treading surface connects to the shoe of the user via straps. The flexibility of the sandals enables perfect adaptation to any terrain. This is how the even distribution of the user's weight is achieved upon the ground.
- MiCS do not contain metallic materials, which prevents interference while working with metal detectors (mine detectors), and also prevents the activation of magnetic mines.

BPV ILPOL

LEVEL IIIA

Protection: Level III+ NIJ Standard 0108.01: Tested and verified to meet or exceed ballistic resistance as specified within NIJ Standard 0108.01

High tenacity PE.

Exterior cover Polyester 600D, WR

Viewport Frame 10 x 25 cm, Level III Bullet Resistant Glass

Ergonomically designed ambidextrous handle.

Padded forearm rest.

Quick release shoulder strap and shield carrying bag.

Dimensions

120 x 60 cm

Thickness: 19 mm

Total Weight: 19.00 kg (Includes: shield, window and handles)

Shield only: 13.00 kg

Optional

Size and design, including viewport size

High power LED light/ Camera

Shield carrier with swivel run

flat wheels

Protection level III, III+, IV

Color: black.

CAR PROTECTION

LEVEL IV

The Hagor Car Protection consists of three level IV stand alone ceramic plates designed with a 20x30cm view port, to provide multi-hit protection with minimal trauma.

In accordance with NIJ 0101.06 Level IV, the Car Protection is portable and can be deployed easily in a tactical situation.

Hand loops placed around the perimeter enables the user easy deployment, placement and adjustment.

Features

Ceramic

Outer shell Polyester 600D, PU, WR.

Nylon webbing straps

Color: Black

Size: 160x120cm

Weight: 20kg

Protection level: IV in accordance with NIJ 0101.06.

BALLISTIC BRIEFCASE

LEVEL IIIA

The Ballistic Briefcase is an innovative product manufactured by Hagor. The ballistic bag is made from Aramid UD and Polyester 600D and was originally developed as an unobtrusive ballistic protection for VIPs.

Lined with black/ grey nylon it has two main compartments. The ballistics are folded and stored in the main cell and unfolds into a full length bulletproof body shield with a quick release opening system.

Two internal compartments with two sleeves in one and a zipped mesh sleeve in the other. Two external pockets, one zipped, one Velcro fastened.

Removable bulletproof interior liner for cleaning and maintenance.

Features

Aramid UD
Polyester 600D, ULY coated, WR.
Nylon webbing straps

Color: Black with Black/ Grey lining

Size: 30x40cm / 160x40cm open

Weight: 5.5kg

Protection level: IIIA in accordance with NIJ 0101.06

BALLISTIC LEATHER BRIEFCASE

LEVEL IIIA

The multi-function Ballistic Briefcase is an innovative product manufactured by Hagor.

This innovation provides un-obtrusive ballistic protection against life threatening rifle ammunition for VIP's

The briefcase is made from superior cowhide leather with lining of Oxford 600D and ballistic layers of Aramid UD. The ballistics are stored in the structure of the briefcase a quick release system incase of emergency.

The briefcase has one main compartment.

The bulletproof interior lining is removable to allow for cleaning and maintenance

Ballistic hard plates level III+ can be added for extra protection.

Features

Aramid UD
Superior Cowhide Leather
Reinforced Leather handle

Color: Brown with White lining

Size: 45x33cm / 68x45cm open

Weight: 4.3kg

Protection level: IIIA in accordance with NIJ 0101.06
